THE UNPLUGGED WEAR · BACKEND PHASE

End-to-end test report

14 Nov 2026 · Tracker TL-BE-00 to TL-BE-09 · Storefront (localhost:3025) and Admin (localhost:3024) on the shared Neon database · test identities only (@example.com, Indiranagar)

21	7	1	4
flows working	bugs found and fixed in this pass	failing check (owner decision)	known limits / planned items

1. Automated checks

CHECK	RESULT	STATUS
TypeScript, all three workspaces	No type errors	Pass
Admin tests	75 of 75 passed	Pass
Backend integration tests (packages/heart, real Postgres)	174 of 174 passed: checkout, stock, refunds, payouts, discounts, auth, settings	Pass
Storefront tests	54 of 55 passed; 1 fails on the hero video pause control (see section 5)	1 failing
Admin production build	Builds cleanly	Pass
Storefront production build	Builds cleanly	Pass

2. Storefront flows (customer website)

FLOW	WHAT WAS CHECKED	STATUS
Home, shop, product page	Pages load from the database; shop lists 155 items; product page has one main heading	Working
Bag and bag drawer	Add to bag opens the drawer; quantity changes; bag survives moving between pages	Working
Promo codes	Unknown code refused; MINIMAL10 and UNPLUGGED10 applied; server total matches the drawer (₹2,129.10)	Working
Guest checkout, cash on delivery	Order TUW-261114-QKU84 placed without an account	Working
Guest order tracking	Order number + email finds the order (email case doesn't matter); timeline follows every admin status change	Working
Sign in and wishlist	Test shopper signs in; saved wishlist comes back	Working
Card checkout with promo	Order TUW-261114-TS4QZ placed through the demo gateway (no money collected)	Working
Customer cancels an order	Cancel inside the cancel window → order cancelled and refund raised automatically	Working
Account order page	Order details, items, totals and timeline shown; staff-only notes stay hidden	Working

Store settings reach the storefront	Free-delivery threshold changed in admin (₹3,000 → ₹3,500) appeared on the storefront after save, then set back	Working
Phone and tablet widths	360 px and 768 px: no sideways scrolling on home, shop, product, bag, checkout, tracking, account	Working
Promo code after a full page reload	The applied code is kept only in memory, so a browser reload clears it (totals are still re-priced on the server, so no wrong charge)	Limitation

3. Admin flows (operations workspace)

FLOW	WHAT WAS CHECKED	STATUS
Sign in and all pages	Owner signs in; all 34 dashboard pages return OK	Working
Products	Edit and save a product → storefront shows the change (save now 10 s / 42 queries on local dev, was 25 s / 75)	Working
Order link	`/orders?open=<order number>` opens the order drawer on a fresh page load	Working
Order status walk	Pending → Confirmed → Printing → Shipped → Delivered from the drawer, one click each	Working
Discounts and search	Discount codes listed with filters (create/edit covered by integration tests); header search finds an order and opens it	Working
Payments list	Payments show with status, method and amount; filters and search work	Working
Cash on delivery money	Mark cash collected → UPI refund payout ₹1,000 (UPI ID stored masked, e.g. ka***@okaxis) → marked paid with a UTR	Working
Refund safety	Refund above what was paid refused; the same UTR can't prove two payouts; double-click / retry makes one refund	Working
Settings	`/settings` opens General; shipping fees save and reach the storefront	Working
Logs	No server errors in either app; no browser console errors	Working

4. Bugs found and fixed in this pass

PROBLEM	FIX	STATUS
Money showed one decimal (₹779.8, ₹2,129.1) in bag, drawer, checkout and the payment button	One formatter for all rupee amounts: always two digits of paise (₹2,129.10)	Fixed
Checkout always said "Discount (10%)" / "Coupon applied: 10% off"	Labels now name the code actually applied, e.g. "Discount (MINIMAL10)"	Fixed
"₹3,000" free-delivery text was hard-coded in the header, announcement bar and checkout	Reads the live admin setting	Fixed
"1 items" on the account order page	"1 item" / "2 items"	Fixed
Delivered order without a tracking code said one "is added when it ships"	Says no tracking code was added for this shipment	Fixed
Product page scrolled sideways by 6 px on a 360 px phone	Purchase row shrinks to fit	Fixed

Brand intro rendered a script tag from a client component (React error); /settings showed a dev warning; product save was slow	Script moved to the page head; /settings redirects to General; product save does fewer queries	Fixed

5. Not working / needs a decision

ITEM	DETAIL	STATUS
Hero video pause control	The storefront test `homepage-typography.test.mjs` fails because the looping hero video has no pause button (WCAG 2.2.2). It was taken out on purpose, so: put the button back, or change the test.	Failing test
Promo code on reload	Cleared by a full browser reload (see section 2). Would need saving with the bag.	Limitation
FAQ delivery rates	FAQ text still quotes ₹3,000 / ₹150 as draft rates instead of the live setting.	Draft copy
Local speed	The database is ~300 ms away from India, so admin saves take seconds locally. Hosted next to the database they take milliseconds.	Dev only
Third-party services	Razorpay, email, image uploads (R2), Qikink and GST invoice PDFs still use demo adapters by plan (integrations come last).	Planned
